## DETAILED ACTION

### *Claim Objections*

1. Claims 1-3,5 and 6 and 14 are objected to because of the following informalities: Claim numbers should be provided. Appropriate correction is required.

In claims 5 and 14, the period between the equations " and ." should be placed at the very end of the claim.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

**A person shall be entitled to a patent unless –**

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,8,9,10,19,20,21,23,26,31,32,34 are rejected under 35 U.S.C. 102(b) as being anticipated by Fry (US 6,127,661).

The reference by Fry discloses an ovenized(thermally insulated chamber) for controlling the temperature of a quartz crystal resonator(14), see figure 1, and col. 7, lines 10-50. A micro-controller(20), sensors(16,17), and heater(18), allow for temperature cycles to be applied and monitored for the resonator, and the " B" mode(temp. rate) frequency operational characteristic of the crystal is measured during the temperature cycles. Data is collected(grouped) and used to correlate(calculate) the thermal characteristic for the specific oscillator assembly(crystal oscillator). Once calibrated, see lines 45-50, a temperature run is performed (" real time" ) to fine

tune thermal gain and thus the desired operational frequency for a particular temperature(temperature dependent frequency). The method steps being inherent to the system as above.

*Allowable Subject Matter*

4. Claims 2-7, 11-18, 22, 24, 25, 27-30 and <sup>§ 35</sup>33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The examiner could not find fair suggestion for the interpolation/extrapolation to derive missing points on a surface as well as defining such a surface in three dimensions using the grouped parameters...using the system subsurface was not suggested.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arnold M. Kinkead whose telephone number is 571-272-1763. The examiner can normally be reached on Mon-Fri, 8:30 am -5 pm.
